Hello,

Here is the design guide I'll be using for my portfolio website:

The logo is a Q because my name starts with Q. The tail is pointing down so that it looks like a tree. I will be using the font **Montserrat** on this website. It's my favorite font and I've used it on my previous (ongoing) project **Toku**page.com .

Here is my current wireframe idea:

It features a place for the logo in the top navigation bar. It also includes a year in review hero banner. This would just show a collage of the updates and events I did with my projects last year. Below that is the about me area which I didn't think needed its own page, so the nav

link would just scroll you down to that section. It includes a brief description about me and my skills. I then added a form so that people could contact me. It is unfunctional, but learning how to make it functional using the backend is something I want to learn eventually as backend functionality is what Toku (my project) requires. Finally I added a footer with my name, copyright (which I don't actually have), and social media links (the white circles).

       If you think I should go back to the drawing board let me know. My original idea was just to have a single page with 3 big thumbnails of each of my projects that you could click to go to another page with more information. I would then have my about me section below that, but hidden unless the user scrolled down (There would be an indicator). I would have done that because of its simplicity, and also that it didn't look like every other cookie cutter website out there. This did not meet the requirements though so I've revised it.

Thank you

Quinn
